Apacer Technology introduced the fourth generation CompactFlash memory card, the Photo Steno Pro IV 300X CF card, for professional cameras. Currently, the capacities are available in 4GB and 8GB.

300X CF card claims to be equipped with the highly compatible high- performance controller, advanced file management ability at faster data transferring rate, and longer life with Apacer exclusive "Wear Leveling Technology". It is also included with the error-correcting codes (ECC) feature for auto-detection and auto-correction of errors. These features contribute to the speeds of read at 47MB/sec and write at 36MB/sec, which can support for UDMA mode on high-level digital cameras.

The card uses the CF4.0 specification and original SLC flash memory (single-level cell). Even when they are using an advanced camera of 1 giga-pixel resolution, 16GB CF card allows them to take up to 7,000 photos. Apacer 300X CF card has passed the compatibility tests of over 100 of the most common DSLRAs and DSCs on the market to ensure reliable quality and compatibility.

The new product also features the dual-channel technology; that is, the controller transfers data in two channels, which is different from the single-channel transfer of conventional CF cards to deliver double bandwidth and double efficiency, as if using two super highways to transfer data to save time on lagging.
