Apacer introduces the brand new Photo Steno Pro IV 300X CF

By NCN News Network

Apacer Technology officially introduces the fourth generation CompactFlash memory card, the Photo Steno Pro IV 300X CF card, for professional cameras. Currently, the capacities are available in 4GB and 8GB. Apacer 300X CF card is equipped with the highly compatible high-performance controller, advanced file management ability at faster data transferring rate, and longer life with Apacer exclusive "Wear Leveling Technology". It is also included with the error-correcting codes (ECC) feature for auto-detection and auto-correction of errors. These features contribute to the excellent read/write performance of Apacer 300X CF card: read at 47MB/sec and write at 36MB/sec, which can support for UDMA mode on high-level digital cameras. Its super speed and super capacity allow users of high-resolution professional cameras to concentrate on photography and enjoy high-speed shooting, because they either have to wait for the lag between shooting and data transfer, nor to worry about inadequate space for storage.

Due to the popularity of digital single lens reflex cameras (DSLRAs), almost all consumers carry high end digital cameras when traveling and are continuously asking for better photographic quality. The DSC technology has already entered the giga-pixel era, and the data transfer speed and capacity of traditional CF memory cards can no longer fulfill the requirements. Apacer Photo Steno Pro IV 300X CF card uses the CF4.0 specification and original SLC flash memory (single-level cell) to deliver outstanding performances, thus allowing users to take high-resolution photos without any worries. Even when they are using an advanced camera of 1 giga-pixel resolution, 16GB CF card allows them to take up to 7,000 photos. Apacer 300X CF card has passed the compatibility tests of over 100 of the most common DSLRAs and DSCs on the market to ensure reliable quality and compatibility.

Apacer Photo Steno Pro IV 300X CF card uses the latest dual-channel technology; i.e. the controller transfers data in two channels, which is different from the single-channel transfer of conventional CF cards to deliver double bandwidth and double efficiency, as if using two super highways to transfer data to save time on lagging. Apacer Technology insists on using original chips on all memory products manufactured in accordance with the EU RoHS Directives, including the lead-free processes, to prevent environmental pollution.
