Apacer Photo Steno Pro IV 300X CF Card for Photographers introduced

☆☆☆☆☆ 0 Votes - Rate It
Friday, November 23rd, 2007 | Related entries: Hardware, Cameras

Apacer Technology has officially introduced the fourth generation of its hugely successful CompactFlash memory card. Called the Apacer Photo Steno Pro IV 300X CF, this card is especially meant for professional cameras.

As of now, the Photo Steno Pro IV 300X CF card is available in capacities of 4GB and 8GB.

The new Photo Steno Pro IV 300X CF card is equipped with the high compatible high-performance controller, advanced file management ability at faster data transferring rates and longer life due to Apacer's "Wear Leveling Technology".

Also included on this card is an error-correcting code (ECC) feature for auto-detection and auto-correction of errors. And, it is these features that add to the already excellent read/write performance of the Apacer 300X CF card. In case you are wondering, the card's read speed is 47MB/sec while the write speed its 36MB/sec, which allows for support for UDMA mode on high-level digital cameras.

Thus, professional photographers will benefit from using the Apacer Photo Steno Pro IV 300X CF card due to its super speed and super capacity that allows users of high-resolution professional cameras to enjoy high-speed photo shooting. They will also not have to wait for the lag between shooting and data transfer, nor will they have to worry about inadequate storage space.

Apacer's Photo Steno Pro IV 300X CF card uses the CF4.0 specification and original SLC flash memory (single-level cell). Even when using an advanced camera of 1 giga-pixel resolution, the 16GB CF card allows users to take up to 7,000 photos.

And, if you are worried about compatibility, then you must know that the Apacer 300X CF card has passed compatibility tests of over 100 of the most commonly used DSLRA and DSC cameras.

Lastly, the Apacer Photo Steno Pro IV 300X CF card uses the latest dual-channel technology which means that the controller transfers data in two channels, which is different from the single channel transfer of conventional CF cards to deliver double bandwidth and double the efficiency.
