Apacer miniSDHC card for mobile storage

The storage capacity on mobile devices just got a lot more useful with the release of Apacer's miniSDHC 4GB memory card.

In an attempt to meet a growing market for rich applications on mobile devices, including MP3, movies, picture, videos, java games and of course email, Apacer is jumping in early on the trend to get bigger and better storage capacities on mobile memory cards.

The miniSDHC is Apacer's first foray into the high-capacity mobile memory cards and they clearly intend on putting their stamp on the market. The SD2.0 (Secure Digital High Capacity) compliant 4GB card utilises the DS2.0 specification for a capacity range from 4-32GB and is compatible with any equipment using SD2.0 memory cards including digital cameras.
