Apacer's New Handy Steno AH620 !!

Written by Hrvoje Jakovac

Thursday, 11 October 2007

Apacer introduces its new fingerprint USB drive, the Handy Steno AH620. The AH620 offers security features such as advanced fingerprint recognition technology, file encryption/decryption and adjustable public and private partitions. Housed in an elegant, metal casing with rubber coating, the AH620 is easy to handle and operate.

The AH620 provides an exceptional solution for a problem that is long associated with USB drives– their convenient size also makes them easy to misplace or lose, and data is easily available to whoever finds it. With the fingerprint recognition technology, the AH620 solves this problem by scanning a user's fingerprint before allowing access to the drive's data. Users are assured that if the AH620 is misplaced, lost or stolen, their important data, bank accounts, passwords, office records and other files will not end up in the wrong hands. The AH620 can be set to recognize 10 fingerprints and it also provides internal security measures, such as file encryption and public/private partition areas.

The AH620's stylish design features a metal casing with a durable rubber coating that is not only scratch- proof, but it also provides a highly tactile grooved surface that is easy to grip for one-touch fingerprint access. Its one-piece design uses a retractable USB connector that is simple to connect and there is no cap to lose. The drive also comes with an easy-to-attach leather strap. The AH620 fingerprint USB drive provides outstanding performance with a high-speed USB2.0 interface, onboard flash memory up to 4 GB, and support for all major operating systems.

The Handy Steno AH620 will be available mid-October in all Apacer sales channels.
