These days, most users are busy transforming their mobile phones into multimedia devices. Even decent enough 2GB storage memories are just not enough to fit in the plethora of data that most users intend to store in their mobile phones. However, an answer to this need is on its way soon.

Memory modules and digital storage products manufacturer Apacer has revealed that its latest product range of microSD High Capacity (microSDHC) flash memory cards beginning with a 4G microSDHC in a class 6 speed rating, while an 8GB microSDHC is slated to hit shelves in Q1 of 2008.

Apacer's Product Director, C.K. Chang maintained, "The market for high-capacity memory cards is growing rapidly, driven by more and more personal digital devices able to handle high resolution video clips, pictures and other media applications. Demand for microSDHC cards is expected to boost in the mobile phone market in 2008. To focus on this market trend and maximizing the satisfaction of consumer's need, Apacer has enhanced its competitiveness in advanced technologies by integrating supply chain, in addition to guarantee abundant output from the manufacturers for mobile cards to expend the market share in whole world."

The humungous 8GB microSDHC card will have the ability to store about 2,048 digital songs, over 2,400 high-resolution pictures, or up to 34.3 hours of high-quality MPEG-4 video.

The other key features of the upcoming Apacer microSDHC memory cards are:

- Compliant with the SD Association Specification, Version 2.00
- Can be used as full-size SDHC card with attached adapter
- "Class 6" SD Speed Class, guaranteeing sustained write speed at 6MB/s
- Includes highly secure CPRM copyright technology
- Support ECC (Error Correcting Code) function
- Support Wear Leveling function to extend product life cycles
- Compatible with microSDHC-enabled devices/readers only, and not backward compatible with standard microSD-enabled devices and readers

As of now, Apacer has not revealed the price details of any of its forthcoming memory cards.
