Apacer Technology Inc., a global leader in memory modules and digital storage, has announced its newest [memory card](#) that supports mobile phones featuring multi-media functions that includes music, pictures and videos. The latest 4G microSDHC in a class 6 speed rating gets added to the microSD High Capacity (microSDHC) [flash memory cards](#) lineup.

This product ensures enormous storage capabilities that cannot be fulfilled by the original microSD card format having a maximum limit of 2GB. It integrates highly secure CPRM copyright technology and is compatible with ECC (Error Correcting Code) function and Wear Leveling function to extend product life cycles.

Also on its way is the 8GB microSDHC, where users will get the freedom to store more than 2,048 digital songs, over 2,400 high-resolution pictures, or around 34.3 hours of high-quality MPEG 4 video. Apacer's [microSD](#) and microSDHC cards, which are compatible with mobile phones, come in wide range of capacity from 1GB to 8GB.

Consumers do have to keep one thing in mind that the microSDHC only supports microSDHC host devices and are not backward compatible with standard microSD-enabled devices.

The company plans to roll out the 8GB microSDHC in the first quarter of 2008.
