Apacer Technology has launched the world's first 4GB (2GBx2) DDR2 1066MHz high frequency, high-capacity, low latency over-clocking memory module kit. This introduction happens to be a first of many kinds for the module vendor as it happens to be the first to achieve DDR2-1066 frequency with single-stick (2GB) memory modules, while retaining a 5-5-5-15 ultra-low-latency timing scheme. Further, PC game enthusiasts will be exposed to this technology for the first time ever, and will surely satiate even the most demanding and hardcore gamers' appetites.

Apacer has managed to cross the normal JEDEC standard timing for DDR2 800 which is 5-5-5-18.

Further, Apacer's overlocking module uses DDR2 128Mx8 memory die produced using the most advanced production process technology. The die is carefully selected to ensure high frequency with low power consumption and low latency.

This superior-quality die is combined with first-class PCB, after which memory module production begins using advanced Surface Mount Technology. Then, all modules undergo dual-channel burn-in testing for an extended period of time.

Here are great reasons why PC gamers would love to get their computers running on Apacer's latest memory module:

- The absolute minimum requirement for gaming under the Windows Vista OS environment is 2GB of memory
- Gamers who want optimum performance are not really satisfied with anything less than 4GB. However, in the past, 4GB memory modules have been limited to 800MHz frequency. Thus, gamers who wanted higher frequencies were stuck with 2GB modules. Now, Apacer's 4GB (2GBx2) DDR2 1066MHz dual-channel overlocking memory module kit solves this problem.

Specifications of the Apacer 4GB (2GBx2) DDR2 1066MHz dual-channel overlocking memory module kit:

- Product Name: 4GB DDR2-1066MHz CL 5-5-5-15
- Memory Capacity: 4GB (2GBx2)
- Memory Architecture: 128MX8
- Operating Voltage: 2.0V
- Number of Pins: 240 Pin
- CAS Latency: CL5-5-5-15
- RoHS Compliant: Yes
- Warranty: Lifelong Warranty
- Packaging: Two-stick Package

As of now, Apacer hasn't released any details regarding its price and availability. But, we are sure that in time PC manufacturers will seize the opportunity to release PC gaming-dedicated machines rigged up with Apacer's latest memory module kit.
